

HEALTH DATA SHARING

What benefits for patients in Europe?

As online pharmacies, EAEP members continuously seek for ways to **enhance the quality, safety and efficiency of healthcare for Europeans**. We have created innovative and secure processes to deal with health data and can offer medicinal products and digital healthcare service while complying with national and EU law. We ensure:

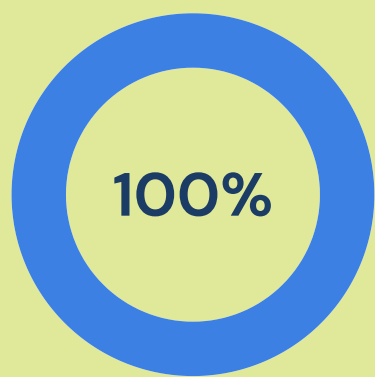

- **Transparent and comprehensible privacy policy**, accessible by every patient and customer
- **Detailed technical and organisational measures**
- **Internal** (and external) **competencies** in privacy and compliance teams/personnel
- **Internal guidelines and regulations** regarding privacy and data protection for internal and external employees
- **Respect of ethical data protection and privacy** by complying with:
 - Privacy-by-design principle
 - Data minimisation principle

Benefits of future enhanced health data sharing for patients:

- **Accessing electronic health records or data from patient registries**, independently of where, when and by whom they are recorded
- **Improving safety and optimisation of medical examinations and treatments**, as therapy/medication could be systematically checked on
- **Obtaining e-prescriptions** and redeeming them in other EU countries
- **Receiving faster and more personalised diagnosis and treatment**
- **Conducting research through secondary health data**, which would lead to better informed preventive strategies

.....and much, much more!

Patients who should have access to interoperable Electronic Health Records by 2030, according to the European Commission*
